

AYO.

PRE-SEED • AUGUST 2026

The AI interface for the PC.

Call it. Point at it. Type silently. Let it act.

AYO makes AI available inside the user's existing workflow—through voice, cursor, context and user-approved action.

Prepared for Sadu Capital

AYO Systems • heyayo.com

PROBLEM

AI is powerful. The interface is still work.

Users leave their task to access intelligence, rebuild context, then manually move the answer back.

TODAY

The copy–switch–prompt loop

- 1 Notice a problem
- 2 Open an AI tool
- 3 Rebuild the context
- 4 Copy the answer
- 5 **Switch back and apply**

Every switch costs attention—and every manual handoff limits what AI can do.

WITH AYO

Intelligence arrives inside the task

- 01 **Point or call** Wake word, hover or silent prompt
- 02 **AYO understands** Screen, file and workspace context
- 03 **AYO helps or acts** Answer, create or execute with approval

The next interface is not another window. It is an always-available layer.

One assistant. Four natural ways to reach it.

AYO adapts to the moment instead of forcing every task into a chat box.

From screen context to trusted action.

A model-flexible orchestration layer turns user intent into contextual help—while the user stays in control.

AYO turns everyday PC moments into outcomes.

The product begins with high-frequency consumer and prosumer workflows, then expands into teams.

LEARN

Understand what is on screen

Explain a Moodle page, summarize a PDF, build a study plan or turn course material into slides.

CREATE

Move from script to media

Draft, storyboard and route a video request to target creative-generation tools.

BUILD

Turn an idea into software

Translate intent into a site or app workflow through target development integrations.

WORK

Act across daily applications

Understand email and documents, draft responses, extract decisions and complete approved steps.

ORGANIZE

Keep context across the day

Files, notes, reminders, workspace memory and personal preferences stay connected.

PLAY

A quiet companion for gaming

Wake word or hotkey help, minimal HUD, short contextual answers and no forced app switching.

Roadmap examples reference target integrations and ecosystem partners under evaluation—not signed commercial partnerships.

The PC is becoming an AI-native surface.

Hardware, operating systems and AI agents are converging; the interaction layer is still open.

1.4B+

monthly active Windows 10/11 devices

55%

of the 2026 PC market forecast to be AI PCs

270M+

worldwide PC shipments in 2025

CATEGORY VALIDATION

- 
Microsoft
 Vision + computer-using agents
- 
OpenAI
 desktop context + computer use
- 
Raycast
 AI across the operating system
- 
Cluely
 real-time contextual overlay

AYO is built for the transition: an independent, model-flexible companion that can win on interaction, localization and workflow depth.

A massive installed base; a focused path into it.

Bottom-up sizing converts the Windows universe into a practical paid-user objective.

TAM

\$168B

1.4B Windows devices × \$120 / year

Global Windows software spend opportunity

SAM

\$12B

100M high-intent users × \$120 / year

Students, creators, developers, gamers and knowledge workers

SOM

\$10.5M ARR

50K paid users × \$17.49 × 12

Five-year management objective; ~0.05% of the estimated SAM

Sizing is intentionally bottom-up. It is a planning framework—not a third-party market forecast.

TRACTION

Early demand—and a five-month plan to prove retention.

AYO has market signal, early willingness to pay and a focused evidence program.

1,130+

people on the waitlist

180K+

organic views / impressions

15

customer interviews

2

early paid subscriptions

FINANCING STATUS

\$15K

angel SAFE
committed

\$60K

Ibtikar five-month plan
accepted; closing documentation

\$75K

initial validation capital
15% of the \$500K round

This is evidence of momentum—not a claim of product–market fit. The next five months are designed to test conversion, CAC and retention.

Consumer simplicity; software margins; team expansion.

Freemium drives reach. Paid plans monetize intensity. Teams add a higher-value expansion path.

AYO competes on the interaction layer.

The category is crowded at the model and app layer; AYO's advantage is how intelligence is reached and used.

Demonstration first. Cohort evidence second. Scale third.

AYO is experienced visually, so creator-led proof is the acquisition wedge—and retention is the gate.

ACQUISITION ENGINE

- Major YouTube creator integrations
- Professional product demos
- UGC + niche creators
- Paid amplification
- Referral loops + Arabic/GCC content

SCALE GATES

≤ \$45

all-in paid CAC target

35%

trial-to-paid target

≥ 1,000

paid users by M4 target

Five months turn product belief into investment evidence.

The \$75K phase is designed to answer one question: should AYO scale acquisition and expansion?

\$20.4K

M5 ending MRR

1,168

M5 paid users

74.5%

M5 gross margin

+\$0.9K

M5 monthly EBITDA

Base-case planning outputs—not guarantees. Live cohort evidence replaces assumptions as it arrives.

Validate the wedge. Expand the surfaces. Become the layer.

Consumer proof creates the right to enter Arabic/GCC, mobile continuity, gaming, integrations and B2B.

TARGET WORKFLOW INTEGRATIONS

Illustrative targets: Higgsfield / video • Manus / presentations • Replit / apps & sites • productivity + knowledge tools

AYO for Teams turns personal productivity into an operating layer.

B2B is a natural expansion from individual adoption—not a pivot away from the consumer wedge.

- 1 Shared knowledge** Company-approved context without repeated uploads
- 2 Permissions + audit** Control who can access data and execute actions
- 3 Workflow templates** Turn recurring tasks into approved, repeatable flows
- 4 Usage + billing** Admin visibility, seats, limits and team economics

FIRST WEDGE

3–5 Saudi/GCC design partners after M5 validation

Founder-led execution with a deliberately lean core.

Product, operations, engineering and growth are owned internally; advisors shorten the learning curve.

ADVISORY BACKBONE

Middleframe CEO

Strategic product, positioning and company-building guidance

Orange Corners

Continued tailored mentoring and ecosystem support

AYO.

THE ROUND

The first \$75K proves AYO. The remaining \$425K scales it.

AYO is raising a \$500K pre-seed round with deployment gated by evidence from the five-month plan.

\$500K

total pre-seed target

\$75K • 15%

\$425K OPEN

\$15K

Angel SAFE committed

\$60K

Ibtikar plan accepted closing documentation

Proposed role for Sadu: lead or co-lead the balance, with milestone-based deployment after M5 evidence.

\$425K USE OF FUNDS

18-month scale plan • product-led B2C → Arabic/GCC → Teams

Build the easiest way to use AI—then make it the new way people use computers.

Sources, definitions and important notes.

External market and competitor claims use public primary sources. Internal metrics are management-reported.
